

# CSE326

## Internet Programming Laboratory Lecture #14

Dr. Navneet Kaur

# Outline

- DOM methods
  - Style
  - Events

# Style

- **element.style.property = value:** Modifies the inline style of an element.
- **element.classList.add(className):** Adds a class to an element's list of classes.
- **element.classList.remove(className):** Removes a class from an element's list of classes.

# Events

- "Events" in web development refer to actions or occurrences that happen in the browser, typically initiated by users or the browser itself.
- The DOM allows JavaScript to register different types of events and execute code in response to these events.
  - **element.addEventListener(event, function):** Attaches an event handler to the specified element.
  - **element.removeEventListener(event, function):** Removes an event handler that has been attached with the addEventListener() method.
